

Pattern Analysis Report

Pattern Analysis Report

1. Features Most Strongly Associated with Defaults:

- The correlation heatmap indicates that the 'PAY_0' (repayment status in September) has a strong positive correlation with default status.
- Other payment statuses (PAY_2 to PAY_6) also show significant correlations with default status.

2. Notable Trends:

- Higher credit limits ('LIMIT_BAL') tend to have a lower default rate.
- Younger clients ('AGE') show a slightly higher tendency to default.

3. Outliers:

- Some clients with extremely high bill amounts ('BILL_AMT1') and low payment amounts ('PAY_AMT1') are outliers and may indicate high risk.
